- ☐ Housing associations, condominiums and associations of co-owners of multi-apartment buildings.
- ☐ Schools, vocational education and training (VET) institutions, units of higher education and research institutions;
- ☐ Non-governmental organisations.
- ☐ Other (please specify).....

Project proposal description

Description of the project idea

The project aims to improve the environmental conditions and infrastructure of the Berehove community by purchasing modern, multifunctional Kärcher municipal equipment for the maintenance of public spaces and green areas. Currently, the community's municipal services have limited technical capabilities for the high-quality and timely cleaning of sidewalks, squares, parks, and other public areas. The existing equipment is outdated and does not ensure the effective performance of seasonal tasks such as clearing leaves, dust, and snow. The project plans to purchase a modern Kärcher municipal vehicle with attachments for year-round maintenance of public spaces. The use of modern equipment will improve the quality of municipal services, enhance the sanitary condition of areas, reduce dust pollution, and ensure more effective maintenance of green spaces. The project also involves cooperation between partner communities, the exchange of experience regarding modern approaches to the improvement and maintenance of public spaces, as well as the dissemination of best practices in the use of municipal equipment to ensure a comfortable and safe environment for residents and visitors to the border region. The expected outcomes of the project include improving the environmental and sanitary conditions of public areas, increasing the efficiency of municipal services, developing cross-border

	cooperation, and implementing modern approaches to urban management.
Expected role of the partner institution	The partner organization will participate in the joint planning and implementation of the project, as well as in the exchange of expertise on the maintenance of public spaces and the use of modern municipal equipment to clear areas of dust, leaves, and snow. The partner will also organize joint events, disseminate the project's results, and promote the adoption of best practices in urban improvement at the local level.
