- ☐ Housing associations, condominiums and associations of co-owners of multi-apartment buildings.
- ☐ Schools, vocational education and training (VET) institutions, units of higher education and research institutions;
- ☐ Non-governmental organisations.
- ☐ Other (please specify).....

Project proposal description

Description of the project idea

The project aims to develop a comprehensive strategy for the revitalization of the community's green spaces, shifting from traditional landscaping to the creation of resilient, multi-functional ecosystems. The initiative focuses on integrating nature-based solutions to enhance climate adaptation, such as sustainable drainage systems and the planting of climate-resilient flora. Furthermore, the strategy prioritizes social cohesion and accessibility, incorporating inclusive design elements—including tactile navigation and barrier-free zones—to ensure these spaces serve as healing environments for vulnerable groups, including veterans and displaced individuals.

Expected role of the partner institution

The partner institution is expected to provide expert guidance in sustainable urban planning and the implementation of green infrastructure best practices. We seek a collaborative relationship focused on knowledge transfer, particularly in the selection of innovative environmental technologies and the

development of eco-educational programs for the local population. Additionally, the partner will play a key role in joint advocacy and monitoring, helping to align the local strategy with European quality standards and ensuring the long-term ecological and social sustainability of the municipal green zones.

+ STATEMENT

I declare that I have provided my personal data voluntarily and that I have read the information clause below before giving my consent.

I consent to the processing of my personal data for the purpose of searching for partners for the preparation of projects under the Interreg Poland-Ukraine Program 2021-2027.
